

Fixing Mac Installation Error

1. Update xcode and install command line tool, in terminal: `xcode-select --install`
2. Update gfortran and clang from <https://cran.r-project.org/bin/macosx/tools/>
3. Possible environment error, then do:
 1. Open Terminal
 2. Write or paste in: `defaults write org.R-project.R force.LANG en_US.UTF-8`
 3. Close Terminal (including any RStudio window)
 4. Start R

For someone runs R in a docker environment (under root), try to run R with below command,

```
LC_ALL=C.UTF-8 R  
# instead of just `R`
```

Or in R or RStudio, run `system('defaults write org.R-project.R force.LANG en_US.UTF-8')`,

Then exit R and RStudio

4. Completely reinstall Rcpp and RcppArmadillo, e.g.:

```
install.packages("RcppArmadillo",  
  dependencies=TRUE,  
  repos="https://cloud.r-project.org")
```
